

## THE PAYCHECK FAIRNESS ACT WOULD HELP CLOSE THE WAGE GAP FOR OKLAHOMA WOMEN

At the time of the Equal Pay Act's passage in 1963, women earned merely 59 cents to every dollar earned by men.<sup>1</sup> Enforcement of the Equal Pay Act and related civil rights laws has helped to narrow the wage gap, but significant disparities remain and must be addressed. Although Congress has recently taken initial steps to improve the laws that govern pay discrimination by passing the Lilly Ledbetter Fair Pay Act of 2009,<sup>2</sup> there is more than must be done to realize the decades old promise of equal pay for equal work. In particular, the Paycheck Fairness Act would close loopholes in the Equal Pay Act, enhance the procedures and remedies available to challenge violations of the law, and provide the government with tools to monitor and address pay inequities. This bill, which has already passed the House of Representatives, is particularly critical in these economically perilous times, when women and their families are especially vulnerable.

### The Gender Wage Gap Persists in Oklahoma

Although the gap between men's and women's wages has narrowed over the past three decades, on average women continue to earn significantly less than men.

- In 2007, on average, women in Oklahoma working full-time, year-round earned only 78% of what men working full-time, year-round earned<sup>3</sup> -- equal to the nationwide average.<sup>4</sup>
- The wage gap is even more substantial when race and gender are considered together. White, non-Hispanic women working full-time, year-round in Oklahoma earned only 74% of the wages of White, non-Hispanic men. However, Black women working full-time, year-round in Oklahoma earned only 64%, and Hispanic women only 50%, of the wages of White, non-Hispanic men.<sup>5</sup>
- The wage gap persists at all levels of education. Women in Oklahoma with a high school diploma earned only 54% of what men with a high school diploma earned. Women in Oklahoma with a bachelor's degree earned only 67% of the amount that men with a bachelor's were paid. In fact, the average Oklahoma woman must receive a bachelor's degree before she earns as much as the average Oklahoma male high school graduate.<sup>6</sup>
- The wage gap exists across occupations. For example, Oklahoma women working full-time, year-round in architecture and engineering occupations earned only 70% of what men in the same occupations earned, and Oklahoma women working full-time, year-round in sales and related occupations earned only 71% of what men in the same occupations earned.<sup>7</sup>

## **Oklahoma Women Are Particularly Vulnerable to Economic Hardship in This Struggling Economy**

In the current economic downturn, many Oklahomans are facing financial problems, stagnant wages and living standards, and job loss. Women in Oklahoma already have higher rates of economic insecurity – on average they have lower earnings than men (\$19,800 compared to \$30,244 in 2007)<sup>8</sup> and are more likely to live in poverty (16% of Oklahoma women compared to 11% of men lived in poverty in 2007).<sup>9</sup> As a result, women may be particularly vulnerable to economic hardship in this struggling economy. For example:

- Women’s lower incomes make it harder for them to make ends meet. Between March of 2008 and March of 2009, the cost of groceries increased 4.6% in Oklahoma and home electricity costs increased 10.5%.<sup>10</sup>
- Although unemployment rates for men and women are rising nationwide,<sup>11</sup> because of their lower earnings, women may have fewer savings to fall back on if they lose their job. Worse yet, women who lose their jobs are also less likely than men to receive unemployment insurance benefits.<sup>12</sup> The unemployment rate in Oklahoma in March 2009 was 5.9%, a 64% increase since the recession began in December 2007.<sup>13</sup>
- In part because of lower earnings, nationwide about a third of women borrowers receive subprime mortgage loans, compared to only a quarter of male borrowers.<sup>14</sup> As the housing market continues to struggle, women may be more likely to face rising mortgage rates and even foreclosures. In 2008, Oklahoma had 16,059 foreclosure filings, up 51% from 2007.<sup>15</sup>
- The worsening recession is affecting all Americans, but women – who were already in a more precarious economic position than men because of lower earnings and higher poverty rates – are more likely to rely on public benefits like Medicaid, food stamps, and housing assistance.<sup>16</sup> In 2008, Oklahoma provided food stamps to over 419,000 children and adults.<sup>17</sup> Additionally, Oklahoma is projected to face budget shortfall in FY 2010 of \$600 million.<sup>18</sup> If the state cuts programs and essential services as a result of this shortfall, women will be disproportionately affected.

**The Paycheck Fairness Act would help close the wage gap and help women to deal with these economic realities.**
