

Social Security: Vital to Arizona Women and Families

Social Security is a family insurance plan that provides retirement benefits and life and disability insurance to Arizona's working families.

- About 1 in 6 residents – about 1,029,000 people – receives disability, survivor, and/or retirement benefits from Social Security.
- 84 percent of residents 65 and older receive Social Security benefits.
- About 74,700 children receive Social Security benefits because of the loss of a parent's income due to death, disability or retirement.
- About 171,300 disabled workers and their family members receive Social Security benefits.
- About 76,100 widowed spouses receive Social Security survivor's benefits. (Nationally, women represent virtually all (99 percent) of spouses receiving survivor benefits.)

Arizona women depend on modest Social Security benefits to get by.

- Women are a majority of both adult beneficiaries and beneficiaries 65 and older.
- The average Social Security benefit for women 65 and older is about \$12,200 per year, compared to about \$16,200 for men 65 and older.
- Older women rely more on income from Social Security than older men do. Median income for women 65 and older living alone is \$18,600 per year – and Social Security represents 64 percent of that amount. Median income for comparable men is \$26,000 – and Social Security represents 42 percent of that amount.

Social Security is a critical anti-poverty program for Arizona women and families.

- Social Security lifted 357,000 residents out of poverty, including 18,000 children.
- Social Security dramatically reduced poverty rates for women 65 and older: from 46 to 13 percent for all women 65 and older, and from 62 to 17 percent for older women living alone.
