

# UNEMPLOYMENT

## FACT SHEET

### Modest Recovery Reaching Women

(Updated August 2012)<sup>1</sup>

*The deep recession that began in December 2007 cost workers nearly 7.5 million jobs before it officially ended in June 2009. Between June 2009 and July 2012, the economy added over 2.7 million net jobs.<sup>2</sup> Women were largely left behind for more than two years of the recovery. But by October 2011 women finally had more jobs than they did at the start of the recovery in June 2009<sup>3</sup> and since March 2012 adult women's unemployment rate has been slightly below their 7.6 percent unemployment rate in June 2009.<sup>4</sup>*

#### KEY FACTS

- **During the recovery, women gained just 20.7 percent of the over 2.7 million net jobs added to the economy.**
- **Since the start of the recovery, adult women's overall unemployment rate decreased from 7.6 percent to 7.5 percent and adult men's dropped from 9.9 percent to 7.7 percent.**
- **Women's modest net job gains in the recovery have been driven by the loss of public sector jobs – nearly 42 percent of their private sector job gains have been offset by their public sector losses.**

#### Women made modest job gains over the course of the recovery.

- Men fared worse in the recession (December 2007 – June 2009), suffering more than 70 percent of the job loss. However, the recovery has been tougher on women – between June 2009 and July 2012, women gained just 20.7 percent of the jobs added. As a result, during the recovery, women have regained only 26.7 percent of the jobs they lost during the recession

while men have regained 40.6 percent of the jobs they lost during the recession.<sup>5</sup>

- Heavy job losses in public sector employment have contributed to the weaker employment picture for women throughout the recovery. Women lost 403,000 public sector jobs over the course of the recovery – offsetting their private sector job gains by 41.5 percent.<sup>6</sup>
- The private sector picked up nearly 3.4 million jobs over the course of the recovery; women gained 28.7 percent of those jobs (970,000).<sup>7</sup>

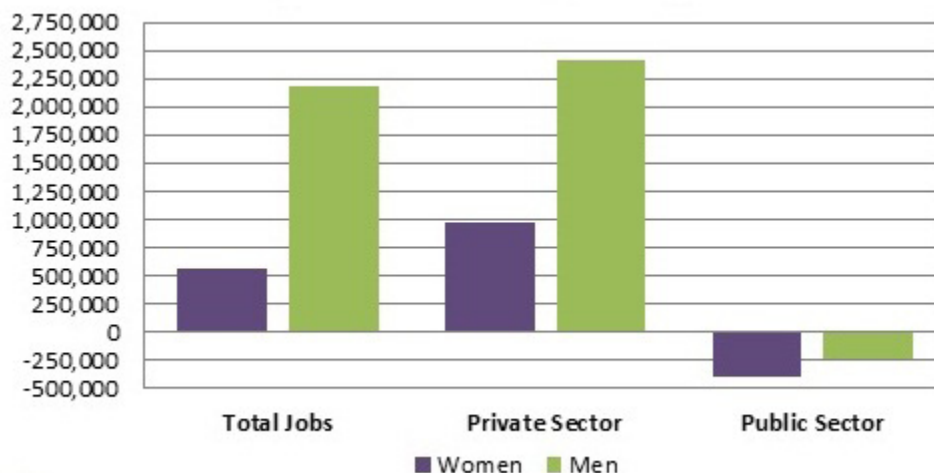

#### Women's unemployment declined slightly since the start of the recovery while men's dropped dramatically.

- Between June 2009 and July 2012, adult women's overall unemployment rate decreased from 7.6 percent to 7.5 percent and adult men's overall unemployment rate dropped from 9.9 percent to 7.7 percent.<sup>8</sup>

#### Unemployment for many vulnerable groups remained high during the recovery.

- Unemployment rates for adult black women and men, adult Hispanic women and men, and single mothers have been persistently higher than for adult women or men overall throughout the recession and recovery.
- Unemployment rates declined during the recovery for adult black men (16.3 percent to 14.8 percent), adult black women (11.6 percent to 11.5 percent), adult Hispanic men (10.7 percent to 8.2 percent), and adult Hispanic women (11.5 percent to 10.5 percent).

## Job change in the recovery (June 2009 - July 2012)

Source: Current Employment Statistics survey, excludes farm jobs.

www.nwlc.org

Unemployment rates for single mothers were unchanged in July from the start of the recovery (11.7 percent).<sup>9</sup>

### Long-term unemployment is substantially higher than at the start of the recovery.

- The percentage of jobless workers who were still looking for work after more than six months of

unemployment increased dramatically since the start of the recovery in June 2009, to 41.1 percent for adult women in July 2012, an 11.8 percentage point increase, and to 44.7 percent for adult men in July 2012, a 14.0 percentage point increase.<sup>10</sup>

- In July, nearly 5.2 million Americans were still looking for work after more than six months.<sup>11</sup>

The economy still has a long way to go to achieve a full recovery. The data highlight the need for policy makers to invest in job creation for women and men – and to reject further cuts in funding for public services that would mean more job losses and increased hardship, especially for women and their families.

1 Revisions to the July version of this analysis reflect both the incorporation of new data each month, and revisions by the Bureau of Labor Statistics to previously reported data.
