

Social Security: Vital to California Women and Families

Social Security is a family insurance plan that provides retirement benefits and life and disability insurance to California's working families.

- About 1 in 8 residents – about 4,842,000 people – receives disability, survivor, and/or retirement benefits from Social Security.
- 84 percent of residents 65 and older receive Social Security benefits.
- About 361,800 children receive Social Security benefits because of the loss of a parent's income due to death, disability or retirement.
- About 781,700 disabled workers and their family members receive Social Security benefits.
- About 383,600 widowed spouses receive Social Security survivor's benefits. (Nationally, women represent virtually all (99 percent) of spouses receiving survivor benefits.)

California women depend on modest Social Security benefits to get by.

- Women are a majority of both adult beneficiaries and beneficiaries 65 and older.
- The average Social Security benefit for women 65 and older is about \$12,000 per year, compared to about \$15,500 for men 65 and older.
- Older women rely more on income from Social Security than older men do. Median income for women 65 and older living alone is \$18,600 per year – and Social Security represents 64 percent of that amount. Median income for comparable men is \$29,200 – and Social Security represents 45 percent of that amount.

Social Security is a critical anti-poverty program for California women and families.

- Social Security lifted 1,716,000 residents out of poverty, including 100,000 children.
- Social Security dramatically reduced poverty rates for women 65 and older: from 42 to 11 percent for all women 65 and older, and from 62 to 16 percent for older women living alone.
- Social Security also reduced poverty rates for minority women 65 and older: from 44 to 14 percent for older African-American women, from 43 to 14 for older Hispanic women, and from 32 to 11 for older Asian women.
