## Stronger Recovery Reaching Women

(Updated May 2013)<sup>1</sup>

*The deep recession that began in December 2007 cost workers nearly 7.5 million jobs before it officially ended in June 2009. From the start of the recovery in June 2009 to April 2013, the economy added almost 4.9 million net jobs.<sup>2</sup> The pace of the recovery has picked up for women after largely leaving them behind at the outset. However, heavier public sector job losses continue to slow the recovery for women.*

### Women's job gains over the course of the recovery were held back by public sector losses.

- The economy added almost 4.9 million jobs from the start of the recovery to April 2013; women gained nearly 1.7 million of those jobs while men gained over 3.2 million of these jobs. Between June 2009 and April 2013, women gained back 77.9 percent of the jobs they lost in the recession, while men gained back 60.7 percent.<sup>3</sup>
- The private sector picked up over 5.6 million jobs from the start of the recovery to April 2013; women gained almost 2.1 million of those jobs while men gained over 3.5 million of these jobs. Between June 2009 and April 2013, women gained back 91.9 percent of the private sector jobs they lost in the recession, while men gained back 65.6 percent.<sup>4</sup>
- Heavy job losses in public sector employment have slowed the recovery, especially for women. From the start of the recovery through April 2013, women lost 444,000 public sector jobs. Men lost 297,000 public sector jobs over the same period.<sup>5</sup>

### Women's and men's unemployment dropped since the start of the recovery – men's dropped dramatically.

- Between June 2009 and April 2013, adult women's overall unemployment rate decreased from 7.6 percent to 6.7 percent and adult men's overall unemployment rate dropped from 9.9 percent to 7.1 percent.<sup>6</sup>

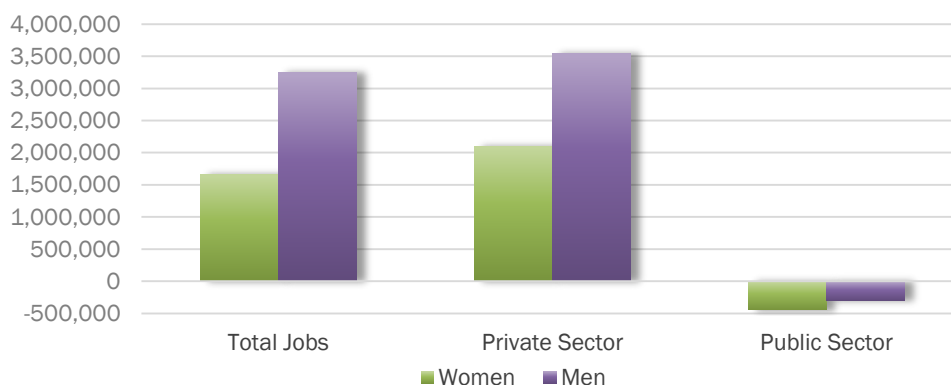

### KEY FACTS

- **Women gained back nearly 78 percent of the jobs they lost in the recession and men gained back nearly 61 percent, from the start of the recovery to April 2013.**
- **Women's public sector job losses wiped out over 21 percent of their private sector job gains from the start of the recovery to April 2013.**
- **Adult women's overall unemployment rate decreased from 7.6 percent at the start of the recovery to 6.7 percent in April 2013 and adult men's dropped from 9.9 percent to 7.1 percent.**
- **More than four in ten jobless adult women and men were unable to find work after more than six months of searching in April 2013.**

### Unemployment for many vulnerable groups remained high during the recovery.

- Unemployment rates for adult African-American women and men, adult Hispanic women and men, and single mothers have been persistently higher than for adult women or men overall throughout the recession and recovery.

## Job Change in the Recovery (June 2009 - April 2013)

Source: Current Employment Statistics survey, excludes farm jobs.

[www.nwlc.org](http://www.nwlc.org)

- Unemployment rates declined during the recovery for adult African-American women (11.8 percent to 11.6 percent), adult African-American men (16.3 percent to 12.6 percent), adult Hispanic women (11.5 percent to 7.5 percent), adult Hispanic men (10.7 percent to 7.6 percent), and single mothers (11.7 percent to 10.3 percent).<sup>7</sup>
- In April, almost 4.4 million Americans were still looking for work after more than six months.<sup>9</sup>

### Long-term unemployment is substantially higher than at the start of the recovery.

- The percentage of jobless workers who were still looking for work after more than six months of unemployment increased substantially since the start of the recovery, to 42.9 percent for adult women in April 2013, an increase of 13.6 percentage points, and to 42.8 percent for adult men in April 2013, an increase of 12.1 percentage points.<sup>8</sup>

*The economy still has a long way to go. Overall, less than two-thirds of the jobs lost during the recession have been regained in the recovery. The data highlight the need for lawmakers to end the sequester and invest in job creation for women and men.*

*Policymakers must reject further cuts in funding for public services that would mean more job losses and increased hardship, especially for women and their families.*
