The Importance Of Fair Pay For Oregon Women
April 2012

At the time of the Equal Pay Act’s passage in 1963, women working full time, year round were paid merely 59 cents for every dollar paid to their male counterparts. Enforcement of the Equal Pay Act and related civil rights laws has helped to narrow the wage gap, but significant disparities remain and must be addressed.

Women have struggled to regain jobs in the recovery and continue to face high levels of long-term unemployment, even as their families rely on them more heavily for financial support. Wages overall are stagnating and the wage gap has barely budged over the last ten years. The gap particularly harms women in these economically difficult times, when women and families are especially financially vulnerable. Although Congress has taken initial steps to improve the laws that govern pay discrimination by passing the Lilly Ledbetter Fair Pay Act of 2009, there is more that must be done to realize the decades-old promise of fair pay for equal work.

The Gender Wage Gap Persists in Oregon

Although the gap between men’s and women’s wages has narrowed over the past five decades, the typical woman continues to be paid substantially less than the typical man.

• In 2010, the typical woman in Oregon working full time, year round was paid only 77 cents to every dollar paid to a man working full time, year round – equal to the nationwide wage gap of 77 cents.

• The wage gap is even more substantial for African-American and Hispanic women. White, non-Hispanic women working full time, year round in Oregon were paid only 74 cents to every dollar paid to white, non-Hispanic men working full time, year round. However, African-American women working full time, year round in Oregon were paid only 75 cents and Hispanic women only 50 cents, to every dollar paid to white, non-Hispanic men who worked full time, year round.

• The wage gap persists at all levels of education. In 2010, women in Oregon with a high school diploma were paid only 75 cents to every dollar paid to men with a high school diploma. Comparing women and men in Oregon with a bachelor’s degree the figure was 65 cents. In fact, the typical Oregon woman must receive a bachelor’s degree before she is paid as much as the typical Oregon man who has completed some college or attained an associate’s degree.

• The wage gap exists across occupations. For example, Oregon women working full time, year round in 2010 in management, business, and financial occupations were paid only 69 cents to every dollar paid to men in the same occupations, and Oregon women working full time, year round in sales and related occupations were paid only 60 cents to every dollar paid to men in the same occupations.
Fair Pay Is More Important to Oregon Women Than Ever in This Struggling Economy

In the current economic crisis, many people are facing financial problems, stagnant wages, and unemployment. Women in Oregon already have higher rates of economic insecurity than do men in Oregon: in 2010, women working full time, year round typically had lower earnings than men ($35,301 compared to $45,685) and were more likely to live in poverty (15.2 percent of Oregon women compared to 13.0 percent of men). As a result, women are particularly vulnerable to economic hardship in today’s struggling economy, when every dollar counts. For example:

• High unemployment rates for men have fallen since the end of the recession, but two-and-a-half years into the recovery, women’s unemployment nationwide remained above its level at the end of the recession. The unemployment rate for women in Oregon in 2011 was 8.7 percent, a 3.5 percentage point increase since the recession began in December 2007, and 40.1 percent of jobless women workers in Oregon had been looking for work for 27 weeks or more. Women’s lower earnings contribute to the fact that women frequently have fewer savings to fall back on if they lose their jobs. Nationally, the average weekly unemployment insurance benefit paid to women was $259, while the average benefit for men was about $310. Worse yet, women who lose their jobs are also less likely than men to receive unemployment insurance benefits at all.

• The economic crisis has affected all Americans, but has been particularly hard for women – who are already in a more precarious economic position than men because of lower earnings and higher poverty rates. Women are more likely to rely on public benefits like Medicaid, food stamps (SNAP), and housing assistance, services which many states have cut during the crisis. About 10 percent of non-elderly adult Oregon women and 32 percent of Oregon children relied on Medicaid in 2010. In December 2011, the most recent month for which data are available, Oregon provided food stamp benefits to almost 805,400 children and adults, an increase of over 49,000 from the previous year. For many low-wage workers, these programs provide crucial support to meet basic needs when wages aren’t enough. For example, for a full-time year-round worker at Oregon’s minimum wage, the annual pay is just barely above the poverty line for a family of three.

• Recent tightening of state budgets has caused many states to cut back on necessary services. In Oregon, enacted cuts to Temporary Assistance for Needy Families disproportionately affect women and will create further hardship for Oregon women and their families.

• In 2011, women made up about two-thirds of all workers that were paid minimum wage or less, totaling almost 2.4 million women 16 and older. In Oregon, the minimum wage was $8.80 per hour, equivalent to only about $17,600 a year for those working full time year round. The minimum cash wage for tipped employees in Oregon was also just $8.80 per hour. Nationally, women make up almost two-thirds (64.0 percent) of workers in tipped occupations. Raising the minimum wage would help close the wage gap for Oregon women.

Fair pay would help close the wage gap and increase women’s economic security.

10 NWLC calculations from 2010 ACS, Table B20004: Median Earnings by Sex by Educational Attainment for the Population 25 Years and Over, available at http://www.census.gov/acs/www/ (last visited Dec. 9, 2011). These data include all workers 25 and over and is not broken down by work experience.
